

User Experience Design

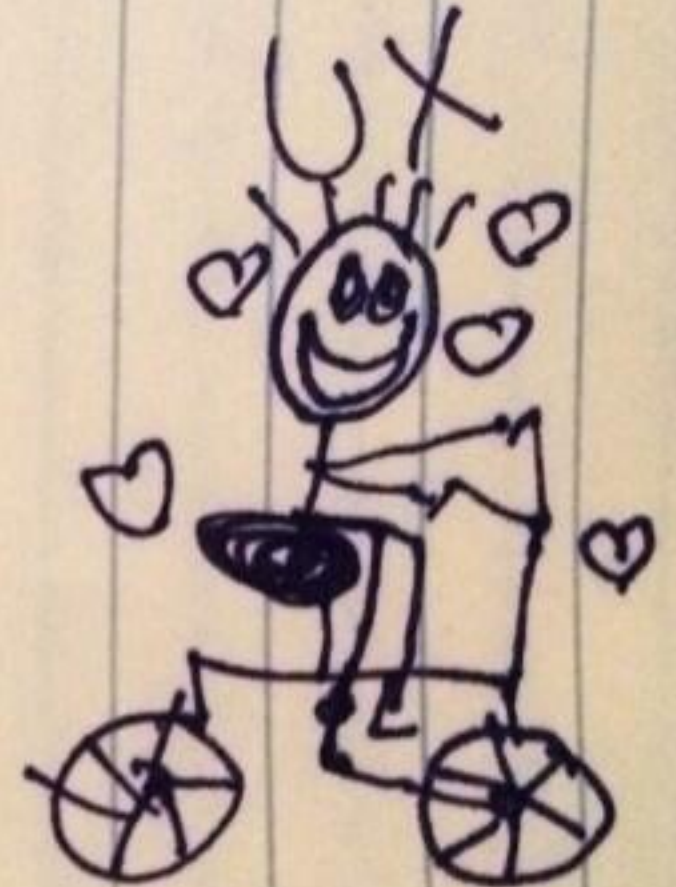

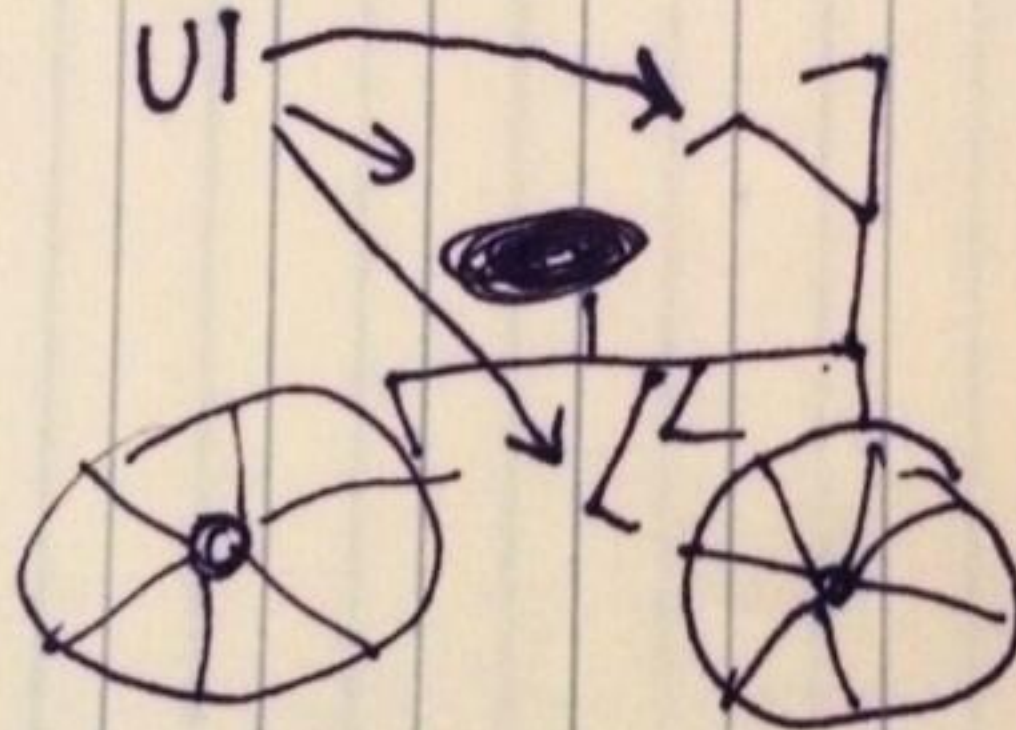

It is the journey that counts

Purpose of UX Design

USER

Product

Steps, techniques and tools

- There are many different, overlapping, steps techniques and tools
- You do not always have to use all of them
- Build a workflow that works for you and your clients
- However, it should always start in the same place...

Users

It is user centred or it is wrong

Users

- Must be user centred
- Need to understand your users, who may be widely varied
- Is the customer is always right?

Personas

- A 'mockup' of a group of potential users
- Based on knowledge and data
- However, even 'sketchy' personas can be helpful
- Help to understand users
- Capture and express their needs, motivations, values, traits, etc.
- In turn, this helps to design core functionality, UI and UX
- Allows a user centred focus when not directly engaged with users

Objective	Questions
Define the Purpose/ Vision for the Site	- What is the purpose of the site? - What are the goals of the site?
Describe the User	Personal - What is the age of your person? - What is the gender of your person? - What is the highest level of education this person has received? Professional - How much work experience does your person have? - What is your person’s professional background? - Why will they come to the site? (User needs, interests, and goals) - Where (or from whom) else is this person getting information about your issue or similar programs or services? - When and where will users access the site? (User environment and context) Technical - What technological devices does your person use on a regular basis? - What software and/or applications does your person use on a regular basis? - Through what technological device does your user primarily access the web for information? - How much time does your person spend browsing the web every day?
User Motivation	- What is your person motivated by? - What are they looking for? - What is your person looking to do? - What are his needs?

Persona:	USDA Senior Manager Gatekeeper
Photo:	
Fictional name:	Matthew Johnson
Job title/ major responsibilities:	Program Staff Director, USDA
Demographics:	51 years old - Married - Father of three children - Grandfather of one child - Has a Ph.D. in Agricultural Economics.
Goals and tasks:	He is focused, goal-oriented within a strong leadership role. One of his concerns is maintaining quality across all output of programs. Spends his work time: - Requesting and reviewing research reports, - preparing memos and briefs for agency heads, and - supervising staff efforts in food safety and inspection.
Environment:	He is comfortable using a computer and refers to himself as an intermediate Internet user. He is connected via a T1 connection at work and dial-up at home. He uses email extensively and uses the web about 1.5 hours during his work day.
Quote:	“Can you get me that staff analysis by Tuesday?”

Scenarios

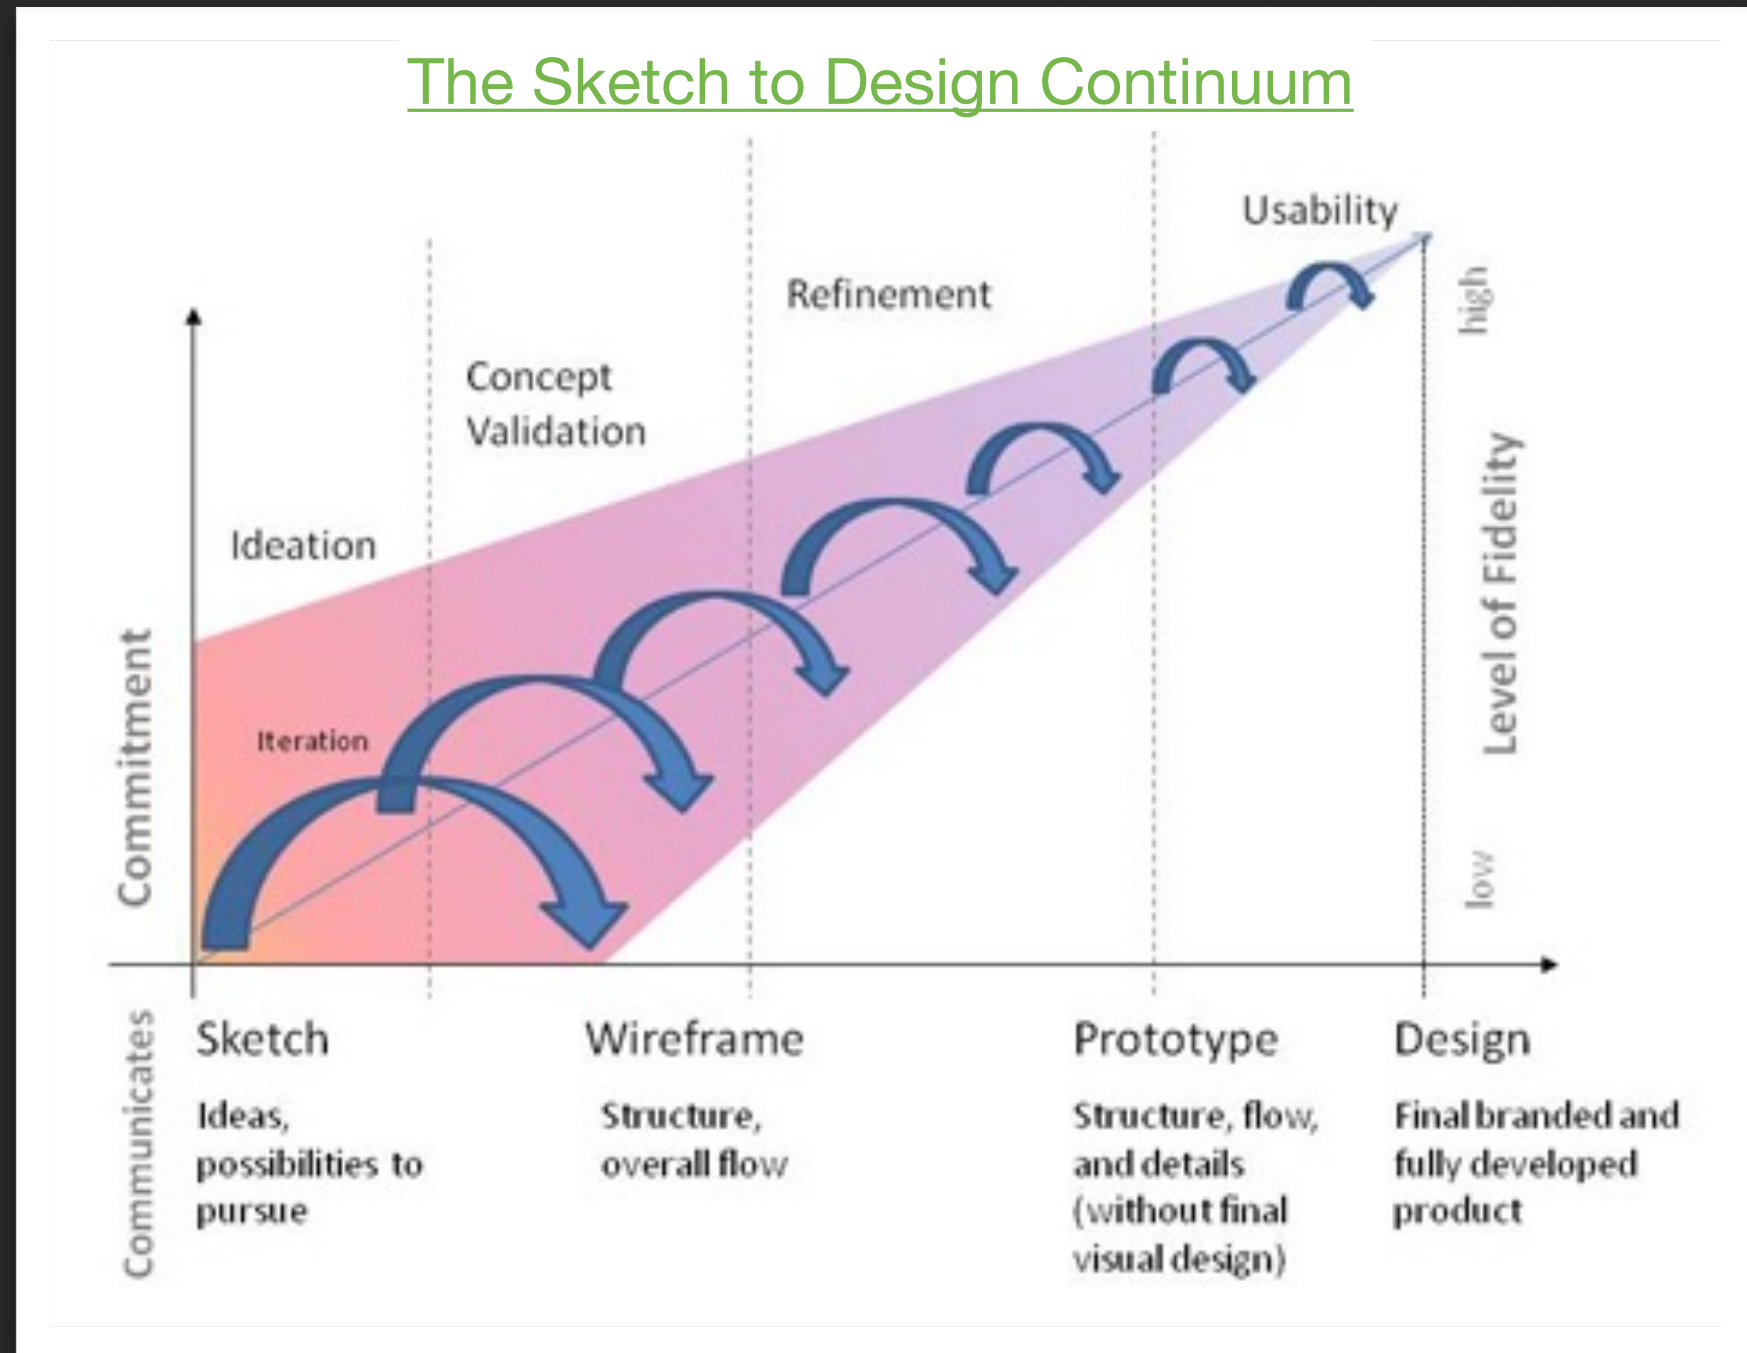

- Depict the context within which users engage with your product
- Define the users situation and their goals
- Together with personas, scenarios can be used to define use cases
- Useful for designing UI, UX and eventually usability tests

Workflow

Putting tools to work, constructively

Workflow

- Sketch
- Wireframe
- Mockup
- Paper Prototype
- Functional Prototype

Sketch

- Always a good first step
- Helps to generate ideas, with or away from the client
- Sketching makes you think and work faster
- Sketching makes later steps more detailed
- Sketches do not have to be works of art to work well
- Paper and pencil are all you need
- 6-up for breadth, then 1-up to focus on strong ideas

DASHBOARD / EXPLORE

* PAGE USED TO SEARCH THROUGH UPCOMING EVENTS BASED ON USERS GEOLOCATION

* LANDING PAGE ONCE LOGGED IN.

1 - * GEOLOCATION DISPLAYS CITY/TOWN BASED ON USER LOCATION
* EVENTS ORGANISED BY DAY APPROXIMATE

2 - * PIXELATED IMAGE OF BELFAST - DEPENDS ON LOCATION OF USER WHAT GRAPHIC DISPLAYED. [HEADER]
* EVENTS ORGANISED IN ORDER, DATE/DAY SHOWN BESIDE PIC.

3 - POLAROID STYLE EVENT PICTURES WITH JUST DATE/NAME

4 - MILES - DISTANCE OF USER - NOT DEPENDING ON DATE

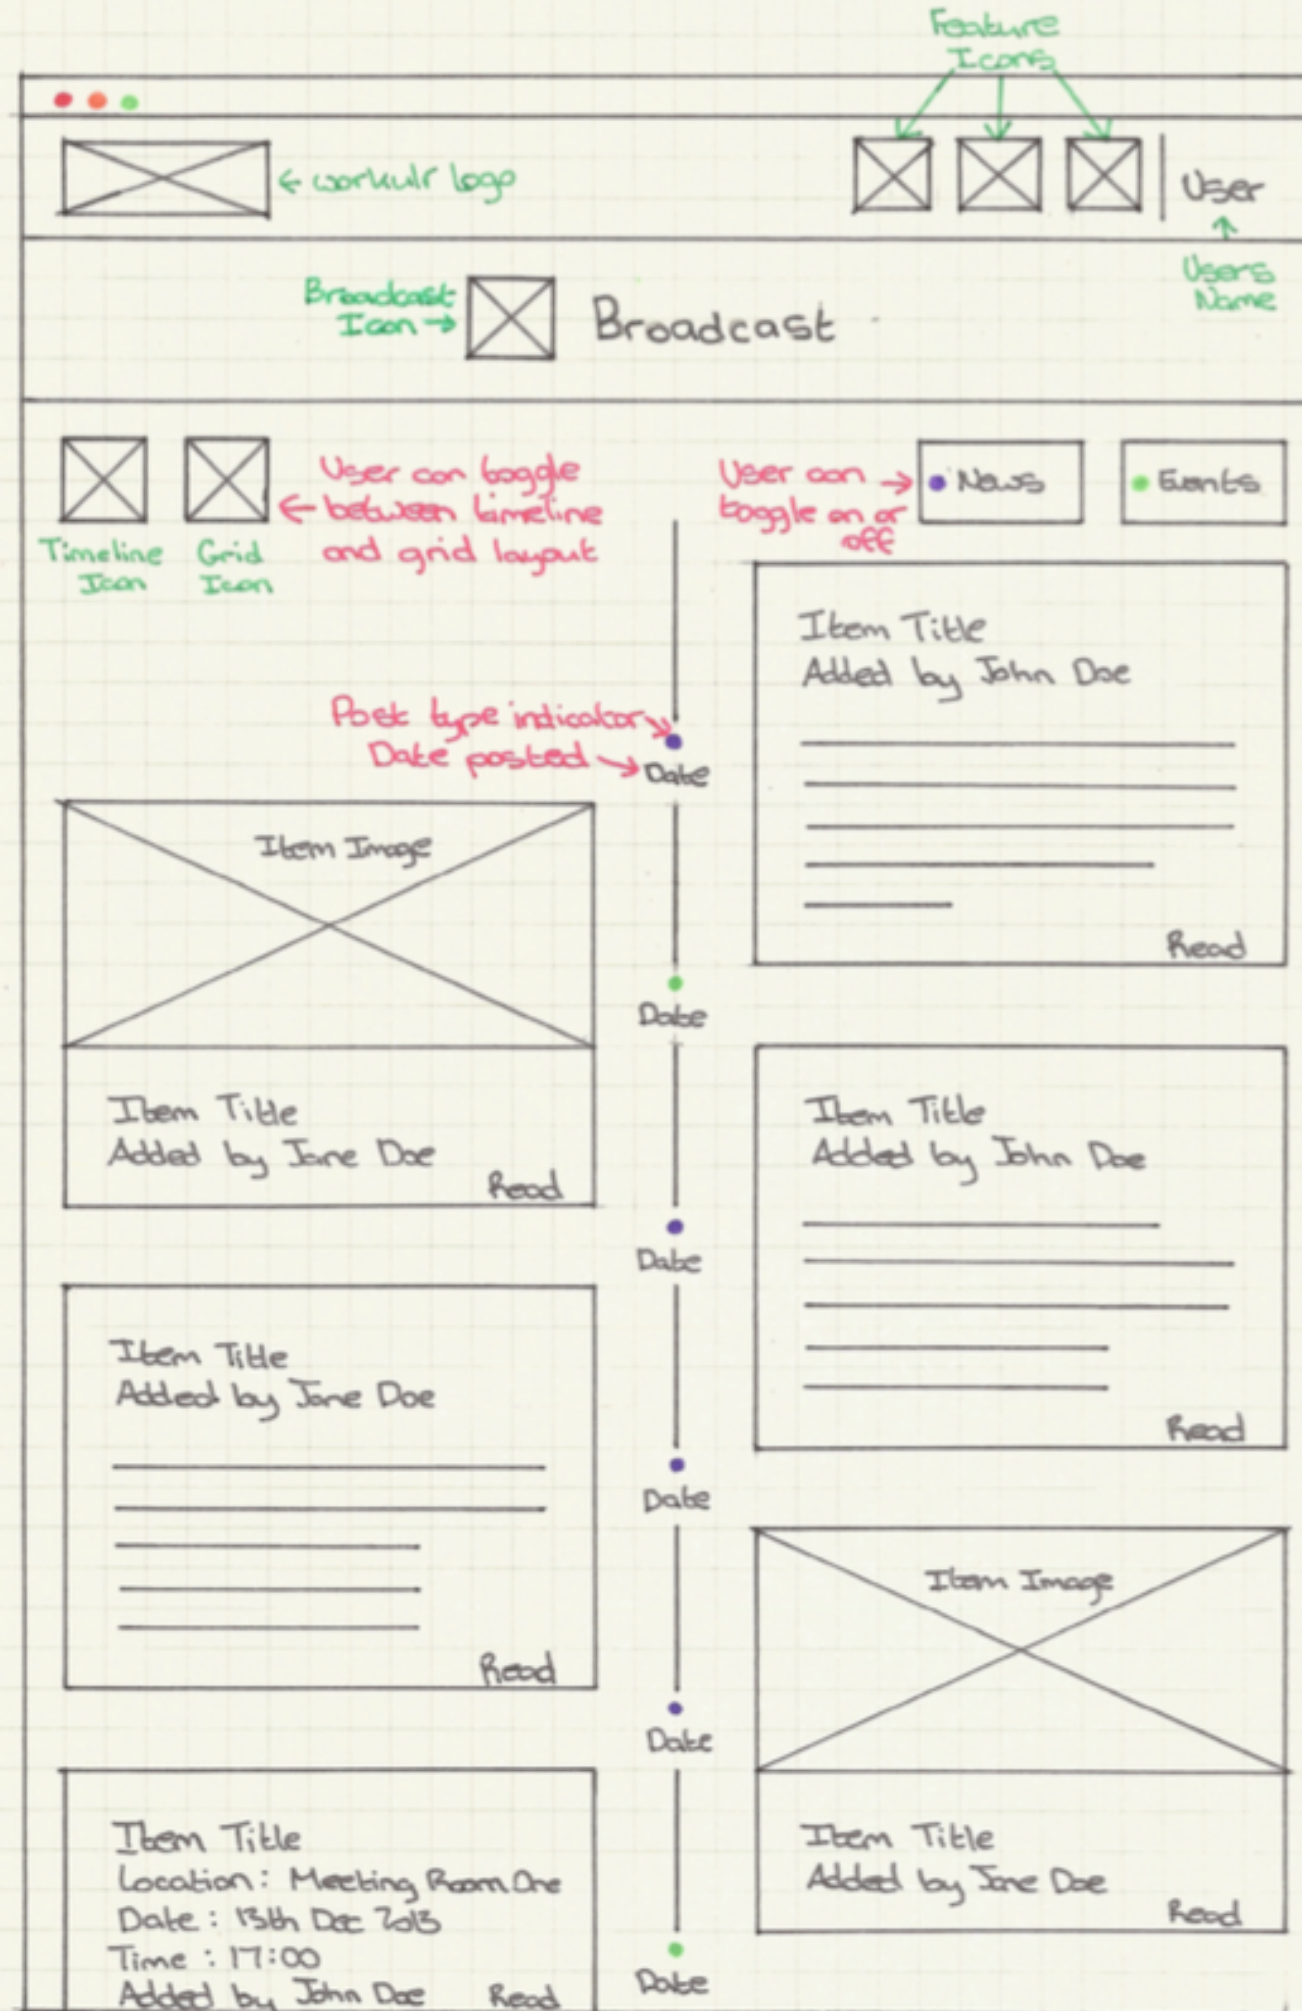

5 - ORDERED BY DATE, CLEAR FACTS + DETAILS NO DESCRIPTION TILL CLICKED THROUGH

6 - FINAL COMBINATION. SHOW BY DATE/DAY. ONLY SHOW DETAILS, NO DESC, EXPAND ON DESKTOP. NO MILE FILTER PREDEFINED BY APP.

Wireframe

- Helps to define user interface structure, functionality, behaviour
- They do not explore visual design
- Although, they connect information architecture to visual elements
- Explore ways to consistently represent information
- Establish content hierarchy, use of space and positioning
- Annotations are critical, to suggest their dynamic nature

Mockup

- Can be considered as high fidelity wireframes
- Layer visual design consideration onto wireframes
- Start to see what the finished product might look like

Paper Prototype

- A way to test paper based designs, interactively, with users
- Help to focus on user experience as well as interface design
- Nothing magical, simply using paper to test ideas
- Code free, fast, cheap, accessible to users, and low risk
- Recording what happens during testing is critical for learning

Interactive Prototype

- A step further than paper prototyping but stops short of functionality
- Useful once digital assets are available and can help to creating them
- Becoming a natural aspect of the design realisation process
- Again, places a focus on user experience as well as interface design
- Close to product, so can make it easier for users to contribute
- Still code free but much slower than paper prototyping
- More costly, e.g. time, so a greater risk but can be very informative
- Again, recording what happens during testing is critical for learning

Functional prototype

- Introduces functionality, both interactive and automatic
- Helps to test how designs translate to an active product
- Although, if unrefined, may not help progress UX thinking
- Explore underlying process
- Experiment with realising interactive elements
- Examine technical challenges and risks
- Requires code and some commitment but very tangible
- Again, recording what happens during testing is critical to learning

Continuous design

Nothing is ever perfect

Implement

- Design does not stop at implementation
- Implementation is an opportunity to learn
- However, it is expensive and risky without proper preparation
- Methodologies such as Lean implement early in the project lifecycle
- However, they are designed to do so in a constructive way

Iterate

- No one gets it right first time
- All good user experience design requires a longitudinal approach
- Learning from longer term user exposure is invaluable
- Do not be precious: test, fix, adapt and evolve
